

Setting up ENMU Email on an iOS Device

This guide was prepared on an iPhone 6 running iOS 8.4. Other devices or OS may look slightly different.

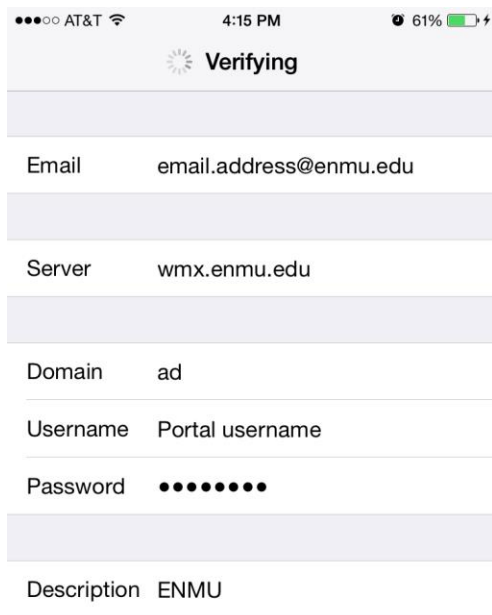

To start, open the Settings app on your device. Then select the option Mail, Contacts, and Calendars. Tap Add Account, and select Exchange, the second option on the list.

Enter your email address and password, and a description. The description will be the name the Mail app uses while displaying the inbox.

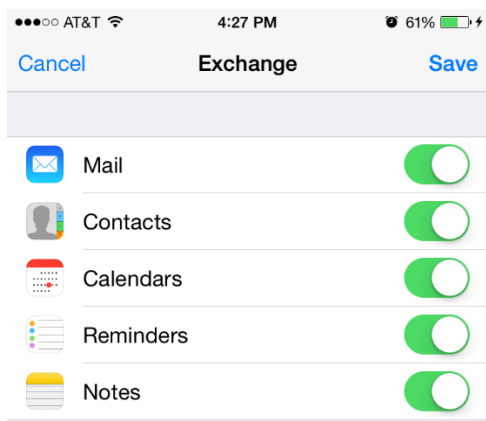

The app will then take you to another screen, to enter more detailed information. Your Email address should still be entered into its field. In the next field, "Server", you will put **wmx.enmu.edu**. The next set of fields will ask you for your Domain, Username and Password. Your Domain is **AD**, your username will be your **AD Username, which you use for your computer and the Portal**, and your password will be **your standard ENMU password**. Once all of those are entered correctly, tap Next in the top right hand corner of your screen.

Note: For IOS, the Username format has to be:
[enmu username]@ad.enet.enmu.edu

This will take you to this screen, where you can select what information you want to bring over from your Email account.

After that, hit the save button, and wait a minute or so for your information to sync to your phone. Your date (mail, contacts, etc.) that you selected will be integrated automatically into the relevant app.
